

**Supplement dated February 11, 2022  
to the**

**Alexis Practical Tactical ETF  
(the “Fund”)**

**Prospectus and Statement of Additional Information (“SAI”),  
each dated June 28, 2021**

---

*This supplement makes the following amendment to disclosures in the Fund’s Prospectus and SAI, as well as information provided in Part C to the Fund’s registration statement.*

The address of the Fund’s investment adviser, Alexis Investment Partners, LLC, (the “Adviser”) is:

103 Casterly Green Court  
Montgomery, Texas 77316

All references to the former address of the Adviser (199 Waterpoint Court, Unit 204, Montgomery, Texas 77356) in the Prospectus and SAI, and Part C to the Fund’s registration statement, are hereby replaced with the new address listed above.

**Please retain this Supplement with your Prospectus and SAI for future reference.**

## ALEXIS PRACTICAL TACTICAL ETF - FUND SUMMARY

### Investment Objective

The Alexis Practical Tactical ETF (the “Fund”) seeks total return primarily through long-term capital appreciation, with income and capital preservation as secondary objectives.

### Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, sell, and hold shares of the Fund (“Shares”). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

<b>Shareholder Fees (fees paid directly from your investment)</b>	<b>None</b>
<b>Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)</b>	
Management Fees	0.85%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses <sup>1</sup>	0.00%
Acquired Fund Fees and Expenses <sup>1,2</sup>	0.18%
<b>Total Annual Fund Operating Expenses</b>	<b>1.03%</b>

<sup>1</sup> Estimated for the current fiscal year.

<sup>2</sup> Total Annual Operating Expenses in this fee table may not correlate to the expense ratios in the Fund’s financial highlights (and the Fund’s financial statements) (when available) because the financial highlights include only the Fund’s direct operating expenses and do not include Acquired Fund Fees and Expenses, which represent the Fund’s pro rata share of the fees and expenses of the exchange-traded funds in which it invests.

### Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

**1 Year: \$105      3 Years: \$328**

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

### Principal Investment Strategies

The Fund is an actively managed exchange traded fund (“ETF”). Alexis Investment Partners, LLC (the “Adviser”) serves as the investment adviser. In seeking to achieve its investment objective, the Fund has the flexibility to allocate its assets in markets around the world and among various asset classes and strategies, including equity, fixed-income, commodities (including precious metals), real estate investment trusts (“REITs”), alternative strategies (including merger arbitrage, convertible bond and options-based) and cash and cash equivalents.

Exposures will vary among asset classes and strategies based on the Adviser’s assessment of a range of proprietary and non-proprietary indicators, market cycle analysis and practical judgment. The Adviser expects that the indicators used will evolve over time and may include consideration of: historical risk and return characteristics; global market valuations; global yield curves; inflation; asset class, regional, and country correlations; profit cycle analyses; style and sector rotation; expected beta (*i.e.*, a stock’s volatility relative to the movements of the overall market); estimate revisions and earnings surprises; investor sentiment; and other factors.

In selecting securities and other instruments for the Fund’s portfolio, the Adviser employs quantitative screening and optimization tools to achieve desired market exposures while seeking to manage security-specific and other observable market risks. The portfolio is monitored on an ongoing basis and rebalanced as necessary to seek to ensure that desired market exposures and risk parameters are maintained. Securities may be sold if they exhibit performance that might counteract the desired exposures, to implement a revised

allocation, or if the Adviser identifies a more attractive alternative. A security may also be sold if the Adviser believes it exhibits unusual price movement or volatility.

The expected long-term (over a true secular cycle of at least 10 years) target allocation of the Fund is 70% in equity securities and 30% in fixed income securities. There is no requirement to manage the Fund within this target allocation. Instead, the tactical nature of the Fund's strategy implies that the Fund's actual asset allocation will vary materially depending on market conditions, and the Fund's asset allocation over shorter or longer market cycles may differ materially from the target.

The Fund expects to invest primarily in other ETFs, a type of pooled investment vehicle, to manage cash positions and to seek exposure to broad asset classes, geographic regions, investment strategies or market sectors. The Fund may invest without limit in both developed and emerging markets, including frontier markets. Emerging market and frontier market countries are those countries with low- to middle-income economies as classified by the World Bank, or included in any of the Morgan Stanley Capital International (MSCI) emerging markets or frontier markets indices. Such investments would be made through ETFs that may include securities denominated in foreign currencies and securities trading in the form of depositary receipts. The Fund may invest in fixed-income securities of any credit quality including securities rated below investment grade and comparable unrated securities ("junk"), and expects to invest principally in fixed-income securities that are issued by corporations, issued or guaranteed by the U.S. government or its agencies or instrumentalities, obligations of other sovereign nations, municipal obligations, mortgage-backed and asset-backed securities, inflation-linked debt securities or zero coupon bonds. The Fund may also invest in senior loans and variable rate obligations. The Fund may invest in stocks of companies of any capitalization, publicly traded REITs and exchange-traded notes ("ETNs"). The Fund's investments in cash or cash equivalents may include U.S. and foreign bank certificates of deposit, fixed time deposits, repurchase agreements, bankers' acceptances and other short-term instruments with a remaining maturity of 397 days or less.

The Fund may engage in derivative transactions to seek income, to hedge against fluctuations in securities prices or interest rates, to manage certain investment risks and/or as a substitute for the purchase or sale of securities or commodities. The Fund expects to use derivatives principally when seeking income by selling covered call options or covered put options. The Fund may also purchase put options on ETFs as a hedge and purchase call options to increase market exposure.

### Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and/or ability to meet its objective. The following risks could affect the value of your investment in the Fund:

- **Asset Allocation Risk.** The Fund's investment performance depends upon the successful allocation by the Adviser of the Fund's assets among asset classes, geographical regions, industry sectors, and specific issuers and investments. There is no guarantee that the Adviser's allocation techniques and decisions will produce the desired results. The Adviser's selection and weighting of asset classes may cause the Fund to underperform other funds with a similar investment objective.
- **Asset-Backed and Mortgage-Backed Securities Risk.** Investors in asset-backed securities, including mortgage-backed securities and structured finance investments, generally receive payments that are part interest and part return of principal. These payments may vary based on the rate at which the underlying borrowers pay off their loans. Some asset-backed securities, including mortgage-backed securities, may have structures that make their performance based on changes in interest rates and other factors difficult to predict, causing their prices to be volatile. In particular, during periods of falling interest rates, asset-backed securities are more likely to be called or prepaid, which can result in the Fund having to reinvest proceeds in other investments at a lower interest rate or less advantageous terms, which would adversely affect the Fund. Asset-backed securities are particularly subject to interest rate and credit risks. Mortgage-backed securities are particularly sensitive to changes in interest rates. For example, rising interest rates tend to extend the duration of fixed-rate mortgage-backed securities. As a result, a rising interest rate environment can cause the prices of mortgage-backed securities to be increasingly volatile and increase the risk that payments on principal may occur more quickly or earlier than expected, each of which may adversely affect the Fund's holdings of mortgage-backed securities. In addition, in general, a decline of housing values and other economic developments (such as a rise in unemployment rates or a slowdown in the overall economy) may cause delinquencies or non-payment in mortgages (particularly sub-prime and non-prime mortgages) underlying mortgage-backed securities, which would likely adversely impact the ability of the issuer to make principal and/or interest payments timely or at all to holders of mortgage-backed securities and negatively affect the Fund's investments in such mortgage-backed securities. Asset-backed securities are also subject to liquidity and valuation risk and, therefore, may be difficult to value accurately or sell at an advantageous time or price and involve greater transaction costs and wider bid/ask spreads than certain other instruments. These risks are elevated given the currently distressed economic, market, labor and public health conditions.
- **Commodities Risk.** Exposure to investments in physical commodities subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Investing in physical commodities, including through exchange-traded commodities ("ETCs") or commodity-linked derivative instruments, such as commodity-linked futures, forwards and swaps, is speculative and can be extremely volatile (see "Derivatives Risk" below). The commodities markets may fluctuate rapidly based

on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. Variables such as disease, drought, floods, weather, trade, embargoes, tariffs and other political events, in particular, may have a larger impact on commodity prices than on traditional securities. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. Because certain commodities may be produced in a limited number of countries and may be controlled by a small number of producers, political, economic and supply-related events in such countries could have a disproportionate impact on the prices of such commodities. These factors may affect the value of the Fund in varying ways, and different factors may cause the value and the volatility of the Fund to move in inconsistent directions at inconsistent rates. The current or “spot” prices of physical commodities may also affect, in a volatile and inconsistent manner, the prices of futures contracts in respect of the relevant commodity.

- **Commodity-Linked Derivatives Tax Risk.** As a regulated investment company (“RIC”), the Fund must derive at least 90% of its gross income each taxable year from certain qualifying sources of income under the U.S. Internal Revenue Code of 1986, as amended (the “Code”). The income of the Fund from certain commodity-linked derivatives may be treated as non-qualifying income for purposes of the Fund’s qualification as a RIC, in which case, the Fund might fail to qualify as a RIC and be subject to federal income tax at the Fund level. To the extent the Fund invests in commodity-linked derivatives, the Fund will seek to restrict its income from such instruments that do not generate qualifying income to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) to comply with the qualifying income test necessary for the Fund to qualify as a RIC under Subchapter M of the Code. However, the Fund may generate more non-qualifying income than anticipated, may not be able to generate qualifying income in a particular taxable year at levels sufficient to meet the qualifying income test, or may not be able to accurately predict the non-qualifying income from these investments.

The extent to which the Fund invests in commodity-linked derivatives may be limited by the qualifying income and asset diversification tests, which the Fund must continue to satisfy to maintain its status as a RIC. If the Fund did not qualify as a RIC for any taxable year and certain relief provisions were not available, the Fund’s taxable income would be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. Failure to comply with the requirements for qualification as a RIC would have significant negative tax consequences to Fund shareholders. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income requirement, but in order to do so the Fund may incur significant Fund-level taxes, which would effectively reduce (and could eliminate) the Fund’s returns. The tax treatment of certain commodity-linked derivatives may be affected by future regulatory or legislative changes that could affect the character, timing and/or amount of the Fund’s taxable income or gains and distributions.

- **Counterparty Risk.** The Fund will be subject to credit risk with respect to the counterparties with which the Fund enters into derivatives contracts, repurchase agreements, reverse repurchase agreements, and other transactions. If a counterparty fails to meet its contractual obligations, the Fund may be unable to terminate or realize any gain on the investment or transaction, or to recover collateral posted to the counterparty, resulting in a loss to the Fund. If the Fund holds collateral posted by its counterparty, it may be delayed or prevented from realizing on the collateral in the event of a bankruptcy or insolvency proceeding relating to the counterparty.
- **Depository Receipt Risk.** Depository receipts, including American Depositary Receipts (“ADRs”), involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. Depository receipts listed on U.S. exchanges are issued by banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares (“Underlying Shares”). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares.
- **Derivatives Risk.** Put and call options are referred to as “derivative” instruments since their values are based on, or derived from, an underlying reference asset, such as an index. Derivatives can be volatile, and a small investment in a derivative can have a large impact on the performance of the Fund as derivatives can result in losses in excess of the amount invested. The return on a derivative instrument may not correlate with the return of its underlying reference asset. Derivative instruments may be difficult to value and may be subject to wide swings in valuations caused by changes in the value of the underlying instrument. Other risks of investments in derivatives include risks that the transactions may result in losses that partially or completely offset gains in portfolio positions and risks that the derivative transaction may not be liquid.
- **Emerging Markets Risk.** Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and recordkeeping standards could impede the Adviser’s ability to evaluate local companies and impact the Fund’s performance.

- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.
- **ETF Risks.** The Fund is an ETF, and, as a result of its structure, it is exposed to the following risks:
  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
  - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
  - *Trading.* Although Shares are listed for trading on the NYSE Arca, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **ETNs Risk.** ETNs are senior, unsecured unsubordinated debt securities issued by an underwriting bank that are designed to provide returns that are linked to a particular reference asset or benchmark less investor fees. ETNs have a maturity date and generally are backed only by the creditworthiness of the issuer. As a result, the value of an ETN may be influenced by time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in the underlying market (e.g., the commodities market), changes in the applicable interest rates, and changes in the issuer’s credit rating and economic, legal, political or geographic events that affect the underlying market. ETNs also may be subject to commodities market risk and credit risk.
- **Fixed Income Risk.** Fixed income securities are subject to call, credit, extension, and interest rate risk.
  - *Call Risk.* During periods of falling interest rates, an issuer of a callable bond held by the Fund may “call” or repay the security before its stated maturity, and the Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund’s income.
  - *Credit Risk.* An issuer of a fixed income security, such as a corporate bond, may be unable or unwilling to make interest and principal payments when due. The Fund is also subject to the related risk that the value of a fixed income security may decline because of concerns about the issuer’s creditworthiness. Credit risk is heightened to the extent the Fund invests in below investment-grade securities, which are also referred to as high-yield securities or junk bonds.
  - *Extension Risk.* During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.
  - *Interest Rate Risk.* An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. Variable and floating rate securities generally increase or decrease in value in response to changes in interest rates, although generally to a lesser degree than fixed-rate securities. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives.
- **Foreign Markets Risk.** Investments in ADRs and ETFs that provide exposure to non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, the value of non-U.S. securities may be subject to risk of decline due to foreign currency fluctuations or to political or economic instability. Investments in ADRs also may be subject to withholding or other taxes and may be indirectly subject to additional trading, settlement, custodial, and operational risks. These and other factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.

- **Frontier Markets Risk.** Certain foreign markets are only in the earliest stages of development and may be considered “frontier markets.” Frontier financial markets generally are less liquid and more volatile than other markets, including markets in developing and emerging economies. Securities may have limited marketability and be subject to erratic price movements. Frontier markets may be impacted by political instability, war, terrorist activities and religious, ethnic and/or socioeconomic unrest. These and other factors make investing in frontier market countries significantly riskier than investing in developed market or emerging market countries.
- **Growth Investing Risk.** Growth stocks can be volatile for several reasons. Since those companies usually invest a high portion of earnings in their businesses, they may lack the dividends of value stocks that can cushion stock prices in a falling market. The prices of growth stocks are based largely on projections of the issuer’s future earnings and revenues. If a company’s earnings or revenues fall short of expectations, its stock price may fall dramatically.
- **High Yield and Unrated Securities Risk.** High yield, below investment grade and unrated high risk debt securities (which also may be known as “junk bonds”) may present additional risks because these securities may be less liquid, and therefore more difficult to value accurately and sell at an advantageous price or time, and present more credit risk than investment grade bonds. The price of high yield securities tends to be subject to greater volatility due to issuer-specific factors, such as operating results and outlook and to real or perceived adverse economic and competitive industry conditions. This exposure may be obtained through investments in other investment companies. High yield securities structured as zero-coupon bonds tend to be especially volatile as they are particularly sensitive to downward pricing pressures from rising interest rates or widening spreads and may require the Fund to make taxable distributions of imputed income without receiving the actual cash currency.
- **Inflation-Indexed Securities Risk.** The principal amount of an inflation-indexed security typically increases with inflation and decreases with deflation, as measured by a specified index. It is possible that, in a period of declining inflation rates, the Fund could receive at maturity less than the initial principal amount of an inflation-indexed security. Changes in the values of inflation-indexed securities may be difficult to predict, and it is possible that an investment in such securities will have an effect different from that anticipated.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the Adviser’s success or failure to implement investment strategies for the Fund. The Adviser’s evaluations and assumptions regarding issuers, securities, and other factors may not successfully achieve the Fund’s investment objective given actual market conditions.
- **Market Risk.** The trading prices of equity securities and other instruments fluctuate in response to a variety of factors. The Funds’ NAV and market price may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.
- **Market Capitalization Risk**
  - *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
  - *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole.
  - *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.
- **Market Events Risk.** U.S. and international markets have experienced significant periods of volatility in recent years due to a number of economic, political and global macro factors, including the impact of the coronavirus (COVID-19) pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets. As a result, the risk environment remains elevated.
- **Models and Data Risk.** The Adviser may rely on proprietary models and analysis (“Models and Data”) to make decisions about which securities to purchase or sell or the timing of such transactions. If Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Some of the models used to construct the Fund are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses. In addition, in unforeseen or certain low-probability scenarios (often involving a market

disruption of some kind), such models may produce unexpected results, which can result in losses for the Fund. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data.

- **Municipal Obligations Risk.** Issuers, including governmental issuers, may be unable to pay their obligations as they come due. The values of municipal obligations may be adversely affected by local political and economic conditions and developments. In addition, the values of municipal obligations that depend on a specific revenue source to fund their payment obligations may fluctuate as a result of actual or anticipated changes in the cash flows generated by the revenue source or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source. Municipal obligations may be more susceptible to downgrades or defaults during recessions or similar periods of economic stress. In addition, changes in federal tax laws or the activity of an issuer may adversely affect the tax-exempt status of municipal obligations. Loss of tax-exempt status may cause interest received and distributed by the Fund to shareholders to be taxable and may result in a significant decline in the values of such municipal obligations.
- **New Fund Risk.** The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. Additionally, the Adviser has not previously managed a registered fund, which may increase the risks of investing in the Fund.
- **REIT Risk.** REITs are subject to the risks associated with investing in the securities of real property companies. In particular, REITs may be affected by changes in the values of the underlying properties that they own or operate. Further, REITs are dependent upon specialized management skills, and their investments may be concentrated in relatively few properties, or in a small geographic area or a single property type. REITs are also subject to heavy cash flow dependency and, as a result, are particularly reliant on the proper functioning of capital markets. A variety of economic and other factors may adversely affect a lessee's ability to meet its obligations to a REIT. In the event of a default by a lessee, the REIT may experience delays in enforcing its rights as a lessor and may incur substantial costs associated in protecting its investments. In addition, a REIT could fail to qualify for favorable regulatory treatment.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sector and, therefore, the performance of the Fund could be negatively impacted by events affecting this sector.
  - *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.
- **Senior Loan Risk.** Investments in senior loans are subject to credit risk and general investment risk. Credit risk refers to the possibility that the borrower of a senior loan will be unable and/or unwilling to make timely interest payments and/or repay the principal on its obligation. Default in the payment of interest or principal on a senior loan will result in a reduction in the value of the senior loan and consequently a reduction in the value of the Fund's investments and a potential decrease in the NAV of the Fund. Senior loans are also subject to the risk that the value of the collateral securing a senior loan may decline, be insufficient to meet the obligations of the borrower or be difficult to liquidate. In addition, the Fund's access to the collateral may be limited by bankruptcy or other insolvency laws. Further, loans held by the Fund may not be considered securities and, therefore, purchasers, such as the Fund, may not be entitled to rely on the strong anti-fraud protections of the federal securities laws. Some senior loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the senior loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, including the Fund, such as invalidation of senior loans or causing interest previously paid to be refunded to the borrower. Senior loans are also subject to high yield securities risks and liquidity risks described above.
- **Sovereign Debt Risk.** Sovereign debt instruments are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt.
- **Temporary Defensive Position Risk.** If the Fund takes a temporary defensive position, it may invest all or a large portion of its assets in cash and/or cash equivalents. If the Fund takes a temporary defensive position, it may not achieve its investment objective.
- **U.S. Government Securities Risk.** Certain U.S. government securities are supported by the full faith and credit of the United States; others are supported by the right of the issuer to borrow from the U.S. Treasury; others are supported by the discretionary authority of the U.S. government to purchase the agency's obligations; and still others are supported only by the credit of the

issuing agency, instrumentality, or enterprise. Although U.S. government-sponsored enterprises such as the Federal Home Loan Mortgage Corporation (“Freddie Mac”) and the Federal National Mortgage Association (“Fannie Mae”) may be chartered or sponsored by Congress, they are not funded by Congressional appropriations, and their securities are not issued by the U.S. Treasury, are not supported by the full faith and credit of the U.S. government, and involve increased credit risks.

## **Performance**

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund’s website at [www.lexietf.com](http://www.lexietf.com).

## **Portfolio Management**

*Adviser* Alexis Investment Partners, LLC  
*Portfolio Managers* Jason Browne, President of the Adviser, and Alexis Browne, Chief Operating Officer of the Adviser, have been the portfolio managers of the Fund since its inception in June of 2021.

## **Purchase and Sale of Shares**

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the “bid-ask spread.”

Recent information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at [www.lexietf.com](http://www.lexietf.com).

## **Tax Information**

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

## **Financial Intermediary Compensation**

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

## ADDITIONAL INFORMATION ABOUT THE FUND

### Investment Objective

The Fund's investment objective has been adopted as a non-fundamental investment policy and may be changed without shareholder approval upon written notice to shareholders.

### Principal Investment Strategies

The Fund may invest in certain ETFs beyond the limits under the Investment Company Act of 1940, as amended (the "1940 Act"), subject to certain terms and conditions.

### Principal Investment Risks

An investment in the Fund entails risks. The Fund could lose money, or its performance could trail that of other investment alternatives. The following provides additional information about the Fund's principal risks. It is important that investors closely review and understand these risks before making an investment decision. Just as in the Fund's summary section, the principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears.

- **Asset Allocation Risk.** The Fund's investment performance depends upon the successful allocation by the Adviser of the Fund's assets among asset classes, geographical regions, industry sectors, and specific issuers and investments. There is no guarantee that the Adviser's allocation techniques and decisions will produce the desired results. The Adviser's selection and weighting of asset classes may cause the Fund to underperform other funds with a similar investment objective. In particular, the prices of stocks and bonds in the Fund's portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including both general financial market conditions and factors related to a specific issuer or industry. These risks are generally greater for small- and medium-sized companies. The Fund may invest in securities that are susceptible to specific investment risks. Dividend-paying common stocks tend to go through cycles of doing better (or worse) than the stock market in general. These periods have, in the past, lasted for as long as several years. If stocks held by the Fund reduce or stop paying dividends, the Fund's ability to generate income may be affected. Growth companies are those whose earnings growth potential appears to be greater than that of the market in general, and whose revenue growth is expected to continue for an extended period of time. Stocks of growth companies or "growth securities" have market values that may be more volatile than those of other types of investments. Growth companies typically do not pay a dividend, and dividends can help cushion stock prices in market downturns and reduce potential losses. Value companies are those whose stocks appear to be priced at a material discount to the underlying value of the issuing company. The reason for the apparent discount may reflect an underlying business condition that is more serious or permanent than anticipated, and stocks of value companies may remain depressed for extended periods of time, or may never realize their expected potential value. Companies with an apparently attractive financial condition and prospects for ongoing financial stability may experience adverse business conditions specific to their industry or enterprise that cause their financial condition and prospects to deteriorate. To the extent the Fund invests in dividend-paying common stocks, growth stocks, value stocks or the stocks of companies that experience negative developments in their financial condition, the Fund may underperform funds that invest in other types of securities. These instruments are particularly subject to interest rate, credit and liquidity and valuation risks.
- **Asset-Backed and Mortgage-Backed Securities Risk.** The Fund may invest in asset-backed securities, including mortgage-backed securities and structured investment vehicles, which are legal entities that are sponsored by banks, broker-dealers or other financial firms specifically created for the purpose of issuing particular securities or instruments. As an investor, the Fund will receive payments that are part interest and part return of principal. These payments may vary based on the rate at which borrowers pay off their loans. When a borrower, such as a homeowner with respect to mortgage-backed securities, makes a prepayment, the Fund receives a larger portion of its principal investment back, which means that there will be a decrease in monthly interest payments. An underlying pool of assets, principally automobile and credit card receivables, boat loans, computer leases, airplane leases, mobile home loans, recreational vehicle loans and hospital account receivables may back asset-backed securities in which the Fund may invest. The Fund may invest in or have exposure to these and other types of asset-backed securities that may be developed in the future. The pool provides the interest and principal payments to investors. Asset-backed securities may provide the Fund with a less effective security interest in the related collateral than do mortgage-related securities, and thus it is possible that recovery on repossessed collateral might be unavailable or inadequate to support payments on these securities. Some mortgage-backed securities and structured investment vehicles may be leveraged or have structures that make their reaction to interest rates and other factors difficult to predict, making their prices very volatile.

Home mortgage loans are typically grouped together into "pools" by banks and other lending institutions, and interests in these pools are then sold to investors, allowing the bank or other lending institution to have more money available to loan to home buyers. When homeowners make interest and principal payments, these payments are passed on to the investors in the pool. Some of these pools are guaranteed by U.S. government agencies or by government sponsored private corporations—familiarily called "Ginnie Mae," "Fannie Mae" and "Freddie Mac."

The underlying assets (*i.e.*, loans) are subject to prepayments, which can shorten the securities' weighted average life and may lower their return. The value of these securities also may change because of actual or perceived changes in the creditworthiness of the originator, the servicing agent, the financial institution providing credit support, or swap counterparty. These securities are subject to high degrees of credit, valuation and liquidity risks.

Investments in asset-backed securities may be subject to many of the same risks that are applicable to investments in securities generally, including currency risk, geographic emphasis risk, high yield and unrated securities risk, leverage risk, prepayment and extension risk and regulatory risk. Asset-backed securities are particularly subject to interest rate and credit risks. Asset-backed securities are also subject to liquidity and valuation risk and, therefore, may be difficult to value accurately or sell at an advantageous time or price and involve greater transaction costs and wider bid/ask spreads than certain other instruments. These risks are elevated given the currently distressed economic, market, labor and public health conditions.

Mortgage-backed securities are particularly sensitive to changes in interest rates. For example, rising interest rates tend to extend the duration of fixed-rate mortgage-backed securities. As a result, a rising interest rate environment can cause the prices of mortgage-backed securities to be increasingly volatile and increase the risk that payments on principal may occur more quickly or earlier than expected, each of which may adversely affect the Fund's holdings of mortgage-backed securities. In light of the current interest rate environment, the Fund's investments in these securities may be subject to heightened interest rate risk. In addition, in general, a decline of housing values and other economic developments (such as a rise in unemployment rates or a slowdown in the overall economy) may cause delinquencies or non-payment in mortgages (particularly sub-prime and non-prime mortgages) underlying mortgage-backed securities, which would likely adversely impact the ability of the issuer to make principal and/or interest payments timely or at all to holders of mortgage-backed securities and negatively affect the Fund's investments in such mortgage-backed securities. These risks are elevated given the current distressed economic, market, public health and labor conditions, notably, increased levels of unemployment, delays and delinquencies in payments of mortgage and rent obligations, and uncertainty regarding the effects and extent of government intervention with respect to mortgage and rent payments and other economic matters.

- **Commodities Risk.** Exposure to investments in physical commodities subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Investing in physical commodities, including through ETCs or commodity-linked derivative instruments such as commodity-linked futures, forwards, and swaps, is speculative and can be extremely volatile (see "Derivatives Risk" below). Volatility in the commodities markets may be caused by changes in overall market movements; economic events and policies; war; acts of terrorism; natural disasters; and technological developments. The current or "spot" prices of physical commodities may also affect, in a volatile and inconsistent manner, the prices of futures contracts in respect of the relevant commodity. Certain commodities are used primarily in one industry, and fluctuations in levels of activity in one industry may have a disproportionate effect on global demand for a particular commodity. Moreover, recent growth in industrial production and gross domestic product has made some developing nations oversized users of commodities and has increased the extent to which certain commodities prices are influenced by those markets. ETCs used by the Fund are expected to be pooled investment vehicles with exposure to commodities such as foreign currencies, precious metals, and other physical or non-physical commodities.
  - *Commodity-Linked Derivatives Tax Risk.* As a RIC, the Fund must derive at least 90% of its gross income for each taxable year from sources treated as qualifying income under the Code. The income of the Fund from certain commodity-linked derivatives may be treated as non-qualifying income for purposes of the Fund's qualification as a RIC, in which case, the Fund might fail to qualify as a RIC and be subject to federal income tax at the Fund level. To the extent the Fund invests in commodity-linked derivatives, the Fund will seek to restrict its income from such instruments that do not generate qualifying income to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) to comply with the qualifying income test necessary for the Fund to qualify as a RIC under Subchapter M of the Code. However, the Fund may generate more non-qualifying income than anticipated, may not be able to generate qualifying income in a particular taxable year at levels sufficient to meet the qualifying income test, or may not be able to accurately predict the non-qualifying income from these investments.

The extent to which the Fund invests in commodity-linked derivatives may be limited by the qualifying income and asset diversification tests, which the Fund must continue to satisfy to maintain its status as a RIC. If the Fund did not qualify as a RIC for any taxable year and certain relief provisions were not available, the Fund's taxable income would be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. Failure to comply with the requirements for qualification as a RIC would have significant negative tax consequences to Fund shareholders. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income requirement, but in order to do so the Fund may incur significant Fund-level taxes, which would effectively reduce (and could eliminate) the Fund's returns. The tax treatment of certain commodity-linked derivatives may be affected by future regulatory or legislative changes that could affect the character, timing and/or amount of the Fund's taxable income or gains and distributions.

- **Counterparty Risk.** The Fund will be subject to credit risk with respect to the counterparties with which the Fund enters into derivatives contracts and other transactions such as repurchase agreements or reverse repurchase agreements. The Fund's ability to profit from these types of investments and transactions will depend on the willingness and ability of its counterparty to perform its

obligations. If a counterparty fails to meet its contractual obligations, the Fund may be unable to terminate or realize any gain on the investment or transaction, resulting in a loss to the Fund. The Fund may experience significant delays in obtaining any recovery in an insolvency, bankruptcy, or other reorganization proceeding involving its counterparty (including recovery of any collateral posted by it) and may obtain only a limited recovery or may obtain no recovery in such circumstances. If the Fund holds collateral posted by its counterparty, it may be delayed or prevented from realizing on the collateral in the event of a bankruptcy or insolvency proceeding relating to the counterparty. Under applicable law or contractual provisions, including if the Fund enters into an investment or transaction with a financial institution and such financial institution (or an affiliate of the financial institution) experiences financial difficulties, then the Fund may in certain situations be prevented or delayed from exercising its rights to terminate the investment or transaction, or to realize on any collateral and may result in the suspension of payment and delivery obligations of the parties under such investment or transactions or in another institution being substituted for that financial institution without the consent of the Fund. Further, the Fund may be subject to “bail-in” risk under applicable law whereby, if required by the financial institution's authority, the financial institution's liabilities could be written down, eliminated or converted into equity or an alternative instrument of ownership. A bail-in of a financial institution may result in a reduction in value of some or all of its securities and, if the Fund holds such securities or has entered into a transaction with such a financial security when a bail-in occurs, the Fund may also be similarly impacted.

- **Depository Receipt Risk.** The Fund may hold the securities of non-U.S. companies in the form of depository receipts, including ADRs and Global Depository Receipts (“GDRs”). ADRs are negotiable certificates issued by a U.S. financial institution that represent a specified number of shares in a foreign stock and trade on a U.S. national securities exchange, such as the New York Stock Exchange (“NYSE”). Sponsored ADRs are issued with the support of the issuer of the foreign stock underlying the ADRs and carry all of the rights of common shares, including voting rights. GDRs are similar to ADRs, but may be issued in bearer form and are typically offered for sale globally and held by a foreign branch of an international bank. The underlying issuers of certain depository receipts, particularly unsponsored or unregistered depository receipts, are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities. Issuers of unsponsored depository receipts are not contractually obligated to disclose material information in the U.S. and, therefore, such information may not correlate to the market value of the unsponsored depository receipt. The Underlying Shares in the Fund’s portfolio are usually denominated or quoted in currencies other than the U.S. Dollar. As a result, changes in foreign currency exchange rates may affect the value of the Fund’s portfolio. In addition, because the Underlying Shares trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the Underlying Shares may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for Shares.
- **Derivatives Risk.** Derivatives are financial instruments that have a value which depends upon, or is derived from, a reference asset, such as one or more underlying securities, pools of securities, indexes, rates or currencies. Derivatives may result in investment exposures that are greater than their cost would suggest; in other words, a small investment in a derivative may have a large impact on Fund performance. The successful use of derivatives generally depends on the ability to predict market movements. The use of these instruments requires special skills and knowledge of investment techniques that are different than those normally required for purchasing and selling securities. If the Adviser uses a derivative instrument at the wrong time or judges market conditions incorrectly, or if the derivative instrument does not perform as expected, these strategies may significantly reduce the Fund’s return. The Fund could also experience losses if it is unable to close out a position because the market for an instrument or position is or becomes illiquid.

Derivatives, including options, are subject to a number of risks, some of which are described elsewhere in this Prospectus. The use of derivatives may entail risks greater than, or possibly different from, such risks to which the Fund is exposed. Certain of the different risks to which the Fund might be exposed due to the use of derivatives include the following:

- *Correlation Risk* is the risk that derivative instruments may be mispriced or improperly valued and that changes in the value of the derivatives may not correlate perfectly with the underlying asset or security.
  - *Hedging Risk* is the risk that derivative instruments used to hedge against an opposite position may offset losses, but they also may offset gains.
  - *Segregation Risk* is the risk associated with any requirement which may be imposed to segregate assets or enter into offsetting positions in connection with investments in derivatives. Such segregation will not limit exposure to loss, and the Fund may be exposed to investment risk with respect to the segregated assets to the extent that, but for the applicable segregation requirement, the segregated assets would be sold.
  - *Volatility Risk* is the risk that, because some derivatives involve economic leverage, this economic leverage will increase the volatility of the derivative instruments, as they may increase or decrease in value more quickly than the underlying currency, security, interest rate or other economic variable.
- **Emerging Markets Risk.** Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and

recordkeeping standards could impede the Adviser's ability to evaluate local companies and impact the Fund's performance. There also may be limitations on the rights and remedies available to investors in emerging market companies compared to those associated with U.S. companies. In addition, brokerage and other transaction costs on foreign securities exchanges are often higher than in the United States and there is generally less government supervision and regulation of exchanges, brokers and issuers in foreign countries.

- **Equity Market Risk.** Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises. If you held common stock, or common stock equivalents, of any given issuer, you would generally be exposed to greater risk than if you held preferred stocks and debt obligations of the issuer because common stockholders, or holders of equivalent interests, generally have inferior rights to receive payments from issuers in comparison with the rights of preferred stockholders, bondholders, and other creditors of such issuers.
- **ETF Risks.** The Fund is an ETF, and, as a result of its structure, it is exposed to the following risks:
  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund and/or increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
  - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility or periods of steep market declines and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. The market price of Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by the exchange specialist, market makers or other participants that trade Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Adviser believes that, under normal market conditions, large market price discounts or premiums to NAV will not be sustained because of arbitrage opportunities.
  - *Trading.* Although Shares are listed for trading on the Exchange and may be listed or traded on U.S. and non-U.S. stock exchanges other than the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to Exchange "circuit breaker" rules, which temporarily halt trading on the Exchange when a decline in the S&P 500 Index during a single day reaches certain thresholds (e.g., 7%, 13%, and 20%). Additional rules applicable to the Exchange may halt trading in Shares when extraordinary volatility causes sudden, significant swings in the market price of Shares. There can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares.
- **ETNs Risk.** ETNs are subject to the credit risk of the issuer, and the value of an ETN may drop due to a downgrade in the issuer's credit rating, despite the underlying market benchmark or assets remaining unchanged. The value of an ETN may also be influenced by time to maturity, level of supply and demand for the ETN, volatility and illiquidity in the underlying market,

changes in the applicable interest rates, and economic, legal, political, or geographic events that affect the referenced underlying market or assets. ETNs are also subject to the risk that the other party to the contract will not fulfill its contractual obligations, which may cause losses or additional costs to the Fund. When the Fund invests in ETNs it will bear its proportionate share of any fees and expenses borne by the ETN. For certain ETNs, there may be restrictions on the Fund's right to redeem its investment in the ETN, which is meant to be held until maturity.

- **Fixed Income Risk.** Fixed income securities are debt obligations issued by corporations, municipalities and other borrowers and are subject to various risks, including call, credit, extension and interest rate risks. Fixed income securities typically do not provide any voting rights, except in cases when interest payments have not been made and the issuer is in default. Fixed income securities with longer maturities or durations may be subject to greater price fluctuations due to interest rate, tax law, and general market changes than securities with shorter maturities or durations. Coupons may be fixed or adjustable, based on a pre-set formula. The prices of high-yield bonds, unlike those of investment-grade bonds, may fluctuate unpredictably and not necessarily inversely with changes in interest rates. Changes in the value of portfolio securities will not affect cash income derived from these securities but will affect the Fund's NAV.
  - *Call Risk.* During periods of falling interest rates, an issuer of a callable bond held by a Fund may "call" or repay the security before its stated maturity, and a Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund's income.
  - *Credit Risk.* Credit risk is the risk that the Fund could lose money if an issuer or guarantor of a debt instrument in which the Fund invests becomes unwilling or unable to make timely principal and/or interest payments, or to otherwise meet its obligations. To the extent the Fund has short exposure to the issuers of certain fixed income securities, the Fund is subject to the risk that its investment in a debt instrument could decline because of concerns about the issuer's credit quality or perceived financial condition. Fixed income securities are subject to varying degrees of credit risk, which are sometimes reflected in credit ratings.
  - *Extension Risk.* During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in a Fund's income and potentially in the value of the Fund's investments.
  - *Interest Rate Risk.* The values of debt securities usually rise and fall in response to changes in interest rates. An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. Changes in a debt instrument's value usually will not affect the amount of interest income paid to the Fund, but will affect the value of the Fund's shares. Interest rate risk is generally greater for investments with longer maturities. Certain securities pay interest at variable or floating rates. Variable rate securities reset at specified intervals, while floating rate securities reset whenever there is a change in a specified index rate. In most cases, these reset provisions reduce the effect of changes in market interest rates on the value of the security. However, some securities do not track the underlying index directly, but reset based on formulas that can produce an effect similar to leveraging; others may also provide for interest payments that vary inversely with market rates. The market prices of these securities may fluctuate significantly when interest rates change. Interest rate changes can be sudden and unpredictable, and are influenced by a number of factors, including government policy, monetary policy, inflation expectations, perceptions of risk, and supply and demand for bonds. Changes in government or central bank policy, including changes in tax policy or changes in a central bank's implementation of specific policy goals, may have a substantial impact on interest rates. This could lead to heightened levels of interest rate, volatility and liquidity risks for the fixed income markets generally and could have a substantial and immediate effect on the values of the Fund's investments. There can be no guarantee that any particular government or central bank policy will be continued, discontinued or changed, nor that any such policy will have the desired effect on interest rates. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives.
- **Foreign Markets Risk.** Investments in ADRs and ETFs that provide exposure to non-U.S. companies involve certain risks that may not be present with investments in U.S. companies. For example, investments in non-U.S. companies may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Securities of non-U.S. companies may be subject to different accounting, auditing, financial reporting and investor protection standards than those of U.S. companies. Investments tied to non-U.S. companies may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. Because legal systems differ, there is also the possibility that it will be difficult to obtain or enforce legal judgments in certain countries. Since foreign exchanges may be open on days when the Fund does not price their Shares, the value of the securities in the Fund's portfolios may change on days when shareholders will not be able to purchase or sell Shares. Conversely, Shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.
- **Frontier Markets Risk.** Certain foreign markets are only in the earliest stages of development and may be considered "frontier markets." Frontier financial markets generally are less liquid and more volatile than other markets, including markets in

developing and emerging economies. Frontier markets have a high concentration of market capitalization and trading volume in a small number of issuers representing a limited number of industries. Securities may have limited marketability and be subject to erratic price movements. Frontier market governments typically exercise substantial influence over many aspects of the private sector. In certain cases, the government owns or controls many companies, including the largest company in the country. Accordingly, governmental actions in the future could have a significant effect on economic conditions in frontier market countries. This could affect private sector companies and the Fund, as well as the value of securities in the Fund's portfolio. Further, substantial limitations may exist in certain frontier market countries with respect to the Fund's ability to protect its legal interests and ability to repatriate its investment, investment income or capital gains. The Fund could be adversely affected by delays in, or a refusal to grant, any required governmental approval for repatriation of capital, as well as by the application to the Fund of any restrictions on investment. Procedures concerning transaction settlement and dividend collection may be less reliable than in developed markets and larger emerging markets. Frontier markets have been, and may continue to be, impacted by political instability, war, terrorist activities and religious, ethnic and/or socioeconomic unrest. These and other factors make investing in frontier market countries significantly riskier than investing in developed market or emerging market countries.

- **Growth Investing Risk.** Growth stocks can be volatile for several reasons. Since those companies usually invest a high portion of earnings in their businesses, they may lack the dividends of value stocks that can cushion stock prices in a falling market. The prices of growth stocks are based largely on projections of the issuer's future earnings and revenues. If a company's earnings or revenues fall short of expectations, its stock price may fall dramatically. Growth stocks may be more expensive relative to their earnings or assets compared to value or other stocks.
- **High Yield and Unrated Securities Risk.** The Fund may invest in high yield securities and unrated securities of similar credit quality (commonly known as "junk bonds"). High yield securities generally pay higher yields (greater income) than investment in higher quality securities; however, high yield securities may be subject to greater levels of interest rate, credit and liquidity risk than funds that do not invest in such securities, and are considered predominantly speculative with respect to an issuer's continuing ability to make principal and interest payments. Successful investment high yield securities and unrated securities of similar quality involves greater investment risk and is highly dependent on the Adviser's credit analysis. The value of these securities often fluctuates in response to company, political or economic developments and declines significantly over short periods of time or during periods of general economic difficulty. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the ability of the Fund to sell these securities (liquidity risk). These risks are especially heightened under current conditions. High yield securities structured as zero-coupon bonds tend to be especially volatile as they are particularly sensitive to downward pricing pressures from rising interest rates or widening spreads and may require the Fund to make taxable distributions of imputed income without receiving the actual cash currency. High yield securities also can be thinly traded or have restrictions on resale, making them difficult to sell at an acceptable price. Because objective pricing data may be less available, judgment may play a greater role in the valuation process. If the issuer of a security is in default with respect to interest or principal payments, the Fund may lose its entire investment.
- **Inflation-Indexed Securities Risk.** The principal amount of an inflation-indexed security typically increases with inflation and decreases with deflation, as measured by a specified index. It is possible that, in a period of declining inflation rates, the Fund could receive at maturity less than the initial principal amount of an inflation-indexed security. Although the holders of U.S. TIPS receive no less than the par value of the security at maturity, if the Fund purchases U.S. TIPS in the secondary market whose principal values have previously been adjusted upward and there is a period of subsequent declining inflation rates, the Fund may receive at maturity less than it invested. Depending on the changes in inflation rates during the period the Fund holds an inflation-indexed security, the Fund may earn less on the security than on a conventional bond. The principal amounts of inflation-indexed securities are typically only adjusted periodically, and changes in the values of the securities may only approximately reflect changes in inflation rates and may occur substantially after the changes in inflation rates in question occur.
- **Management Risk.** The Fund is actively managed and uses proprietary investment strategies and processes. There can be no guarantee that the Adviser's judgments about the attractiveness, value and potential appreciation of particular investments and strategies for the Fund will be correct or produce the desired results and no guarantee that the Fund will achieve its investment objective or outperform other investment strategies over the short- or long-term market cycles. If the Adviser fails to accurately evaluate market risk or appropriately react to current and developing market conditions, the Fund's share price may be adversely affected. Securities selected by the Adviser may not perform as expected. This could result in the Fund's underperformance compared to other funds with similar investment objectives.
- **Market Risk.** The trading prices of equity securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. Beginning in the first quarter of 2020, financial markets in the United States and around the world experienced extreme and in many cases unprecedented volatility and severe losses due to the pandemic caused by COVID-19, a novel coronavirus. It is unknown how long circumstances related to the pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.

- **Market Capitalization Risk.**

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole. Some medium capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to large-capitalization companies.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of larger-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, and financial and managerial resources and tend to concentrate on fewer geographical markets relative to larger capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies. Small-capitalization companies also may be particularly sensitive to changes in interest rates, government regulation, borrowing costs and earnings.

- **Market Events Risk.** U.S. and international markets have experienced significant periods of volatility in recent years due to a number of economic, political and global macro factors, including public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets, which could have an adverse effect on the Fund.

The respiratory illness COVID-19 caused by a novel coronavirus has resulted in a pandemic and major disruption to economies and markets around the world, including the United States. Financial markets have experienced extreme volatility and severe losses, and trading in many instruments has been disrupted. Liquidity for many instruments has been greatly reduced for periods of time. Some interest rates are very low and in some cases yields are negative. Some sectors of the economy and individual issuers have experienced particularly large losses. These circumstances may continue for an extended period of time, and may continue to affect adversely the value and liquidity of the Fund's investments. As a result, the risk environment remains elevated.

- **Models and Data Risk.** When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. For example, by relying on Models and Data, the Adviser may be induced to buy certain investments at prices that are too high, to sell certain other investments at prices that are too low, or to miss favorable opportunities altogether. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful.

Some of the models used by the Adviser for the Fund are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses on a cash flow and/or a mark-to-market basis. In addition, in unforeseen or certain low-probability scenarios (often involving a market disruption of some kind), such models may produce unexpected results, which can result in losses for the Fund. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

- **Municipal Obligations Risk.** The U.S. municipal securities market is volatile and can be significantly affected by adverse tax, legislative, or political changes and the financial condition of the issuers of municipal securities. Municipal obligations include revenue obligations, which are generally backed by the revenues generated from a specific project or facility and include private activity bonds and industrial development bonds. Private activity and industrial development bonds are dependent on the ability of the facility's user to meet its financial obligations and on the value of any real or personal property pledged as security for such payment. Private activity and industrial development bonds, although issued by industrial development authorities, may be backed only by the assets of the non-governmental user. Because many municipal securities are issued to finance projects relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal securities market. In addition, municipal securities backed by current or anticipated revenues from a specific project or specific asset can be negatively affected by the discontinuance or reduction in the rate of the taxation supporting the project or asset or the inability to collect revenues for the project or from the assets. If the Internal Revenue Services ("IRS") determines the issuer of a municipal security

has not complied with applicable tax requirements, interest from the security could become taxable, and the security could decline in value. Municipal obligations may also be subject to prepayment risk and extension risk. Certain states and other governmental entities have experienced, and may continue to experience, extreme financial pressures in response to financial, economic and other factors, and may be, or be perceived to be, unable to meet all of their obligations under municipal bonds issued or guaranteed by them; such factors may result in substantial volatility in municipal securities markets and losses to the Fund. Additionally, the Fund's portfolio may have greater exposure to liquidity risk since the markets for such securities may be less liquid than the traditional bond markets. There may also be less information available on the financial condition of issuers of these types of securities than for public corporations. This means that it may be harder to buy and sell such securities, especially on short notice, and these securities may be more difficult for the Fund to value accurately than securities of public corporations.

- **New Fund Risk.** The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. Moreover, investors will not be able to evaluate the Fund against one or more comparable funds on the basis of relative performance until the Fund has established a track record. Additionally, the Adviser has not previously managed a registered fund, which may increase the risks of investing in the Fund.
- **REITs Risk.** Investments in REITs involve unique risks. REITs may have limited financial resources, may trade less frequently and in limited volume, and may be more volatile than other securities. In addition, to the extent the Fund holds interests in REITs, it is expected that investors in the Fund will bear two layers of asset-based management fees and expenses (directly at the Fund level and indirectly at the REIT level). The risks of investing in REITs include certain risks associated with the direct ownership of real estate and the real estate industry in general. These include risks related to general, regional and local economic conditions; fluctuations in interest rates and property tax rates; shifts in zoning laws, environmental regulations and other governmental action such as the exercise of eminent domain; increased operating expenses; lack of availability of mortgage funds or other limits to accessing the credit or capital markets; losses due to natural disasters; overbuilding; losses due to casualty or condemnation; changes in property values and rental rates; and other factors.

In addition to these risks, REITs are dependent upon management skills and generally may not be diversified. REITs are also subject to heavy cash flow dependency, defaults by borrowers or lessees and self-liquidation. In addition, U.S. REITs are subject to special U.S. federal tax requirements. A U.S. REIT that fails to comply with such tax requirements may be subject to U.S. federal income taxation, which may affect the value of the REIT and the characterization of the REIT's distributions. The U.S. federal tax requirement that a REIT distributes substantially all of its net income to its shareholders may result in the REIT having insufficient capital for future expenditures. A REIT that successfully maintains its qualification may still become subject to U.S. federal, state and local taxes, including excise, penalty, franchise, payroll, mortgage recording, and transfer taxes, both directly and indirectly through its subsidiaries. In the event of a default by a borrower or lessee, the REIT may experience delays in enforcing its rights as a mortgagee or lessor and may incur substantial costs associated with protecting investments.

- **Sector Risk.** The Fund's investing approach may result in an emphasis on certain sectors or sub-sectors of the market at any given time. To the extent the Fund invests more heavily in one sector or sub-sector of the market, it thereby presents a more concentrated risk and its performance will be especially sensitive to developments that significantly affect those sectors or sub-sectors. In addition, the value of Shares may change at different rates compared to the value of shares of a fund with investments in a more diversified mix of sectors and industries. An individual sector or sub-sector of the market may have above-average performance during particular periods, but may also move up and down more than the broader market. The several industries that constitute a sector may all react in the same way to economic, political or regulatory events. The Fund's performance could also be affected if the sectors or sub-sectors do not perform as expected. Alternatively, the lack of exposure to one or more sectors or sub-sectors may adversely affect performance.
  - *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Additionally, companies in the technology sector may face dramatic and often unpredictable changes in growth rates and competition for the services of qualified personnel.
- **Senior Loan Risk.** Investments in senior loans are subject to credit risk and general investment risk. Credit risk refers to the possibility that the borrower of a senior loan will be unable and/or unwilling to make timely interest payments and/or repay the principal on its obligation. Default in the payment of interest or principal on a senior loan will result in a reduction in the value of the senior loan and consequently a reduction in the value of the Fund's investments and a potential decrease in the NAV of the Fund. Senior loans are also subject to the risk that the value of the collateral securing a senior loan may decline, be insufficient to meet the obligations of the borrower or be difficult to liquidate. In addition, the Fund's access to the collateral may be limited by

bankruptcy or other insolvency laws. Further, loans held by the Fund may not be considered securities and, therefore, purchasers, such as the Fund, may not be entitled to rely on the strong anti-fraud protections of the federal securities laws. Some senior loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the senior loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, including the Fund, such as invalidation of senior loans or causing interest previously paid to be refunded to the borrower. Senior loans are also subject to high yield securities risks and liquidity risks described above. In addition, bank loans may be subject to extended settlement periods, which may impair the Fund's ability to sell or realize the full value of its loans in the event of a need to liquidate such loans in a compressed period of time. Some of the loans in which the Fund may invest or obtain exposure to may be "covenant-lite" loans. Covenant-lite loans may contain fewer or no maintenance covenants compared to other loans and may not include terms which allow the lender to monitor the performance of the borrower and declare a default if certain criteria are breached. The Fund may experience relatively greater realized or unrealized losses or delays in enforcing its rights on its holdings of covenant-lite loans than its holdings of loans with the usual covenants.

- **Sovereign Debt Risk.** The Fund may invest in securities issued or guaranteed by foreign governmental entities (known as sovereign debt securities). These investments are subject to the risk of payment delays or defaults, due, for example, to cash flow problems, insufficient foreign currency reserves, political considerations, large debt positions relative to the country's economy, or failure to implement economic reforms. There is no legal or bankruptcy process for collecting sovereign debt.

Certain issuers of sovereign debt may be dependent on disbursements from foreign governments, multilateral agencies and others abroad to reduce principal and interest liabilities on their debt. Such disbursements may be conditioned upon a debtor's implementation of economic reforms and/or economic performance and the timely service of such debtor's obligations. A failure on the part of the debtor to implement such reforms, achieve such levels of economic performance or repay principal or interest when due may result in the cancellation of such third parties' commitments to lend funds to the debtor, which may impair the debtor's ability to service its debts on a timely basis. As a holder of sovereign debt, the Fund may be requested to participate in the restructuring of such sovereign indebtedness, including the rescheduling of payments and the extension of further loans to debtors, which may adversely affect the Fund. There can be no assurance that such restructuring will result in the repayment of all or part of the debt.

- **Temporary Defensive Position Risk.** If the Fund takes a temporary defensive position, it may invest all or a large portion of its assets in cash and/or cash equivalents. If the Fund takes a temporary defensive position, it may not achieve its investment objective.
- **U.S. Government Securities Risk.** The Fund may invest in securities issued, sponsored or guaranteed by the U.S. government, its agencies and instrumentalities. However, no assurance can be given that the U.S. government will provide financial support to U.S. government-sponsored agencies or instrumentalities where it is not obligated to do so by law. For instance, securities issued by Ginnie Mae are supported by the full faith and credit of the United States. Securities issued by Fannie Mae and Freddie Mac have historically been supported only by the discretionary authority of the U.S. government. While the U.S. government provides financial support to various U.S. government-sponsored agencies and instrumentalities, such as those listed above, no assurance can be given that it will always do so. In September 2008, at the direction of the U.S. Department of the Treasury, Fannie Mae and Freddie Mac were placed into conservatorship under the Federal Housing Finance Agency, an independent regulator, and they remain in such status as of the date of this Prospectus. The U.S. government also took steps to provide additional financial support to Fannie Mae and Freddie Mac.

The total public debt of the United States as a percentage of gross domestic product has grown rapidly since the beginning of the 2008–2009 financial downturn. Although high debt levels do not necessarily indicate or cause economic problems, they may create certain systemic risks if sound debt management practices are not implemented. A high national debt can raise concerns that the U.S. government will not be able to make principal or interest payments when they are due. This increase has also necessitated the need for the U.S. Congress to negotiate adjustments to the statutory debt ceiling to increase the cap on the amount the U.S. government is permitted to borrow to meet its existing obligations and finance current budget deficits. In August 2011, S&P lowered its long-term sovereign credit rating on the U.S. In explaining the downgrade at that time, S&P cited, among other reasons, controversy over raising the statutory debt limit and growth in public spending. On August 2, 2019, following passage by Congress, the President of the United States signed the Bipartisan Budget Act of 2019, which suspends the statutory debt limit through July 31, 2021. Any controversy or ongoing uncertainty regarding the statutory debt ceiling negotiations may impact the U.S. long-term sovereign credit rating and may cause market uncertainty. As a result, market prices and yields of securities supported by the full faith and credit of the U.S. government may be adversely affected.

## **OTHER INVESTMENT PRACTICES AND STRATEGIES**

**Lending of Portfolio Securities.** The Fund may lend portfolio securities to brokers, dealers and other financial organizations that meet capital and other credit requirements or other criteria established by the Board. These loans, if and when made, may not exceed 33 1/3% of the total asset value of the Fund (including the loan collateral). Such loans may be terminated at any time. Any such loans must be continuously secured by collateral maintained on a current basis in an amount at least equal to the market value of the securities loaned by the Fund. In a loan transaction, as compensation for lending its securities, the Fund will receive a portion of the

dividends or interest accrued on the securities held as collateral or, in the case of cash collateral, a portion of the income from the investment of such cash. In addition, the Fund will receive the amount of all dividends, interest and other distributions on the loaned securities. However, the borrower has the right to vote the loaned securities. The Fund will call loans to vote proxies if a material issue affecting the investment is to be voted upon. Loans are made only to borrowers that are deemed by the securities lending agent to be of good financial standing. Should the borrower of the securities fail financially, the Fund may experience delays in recovering the securities or exercising its rights in the collateral. In a loan transaction, the Fund will also bear the risk of any decline in value of securities acquired with cash collateral. The Fund will attempt to minimize this risk by limiting the investment of cash collateral to high quality instruments of short maturity.

### **Temporary Defensive Positions**

To respond to adverse market, economic, political, or other conditions, the Fund may invest up to 100% of its assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents, or other high quality short-term investments. Temporary defensive investments generally may include short-term U.S. government securities, commercial paper, bank obligations, repurchase agreements, money market fund shares, other money market instruments, and ETFs that invest in the foregoing instruments. The Adviser also may invest in these types of securities or hold cash while looking for suitable investment opportunities or to maintain liquidity. In these circumstances, the Fund may be unable to achieve its investment objective.

### **PORTFOLIO HOLDINGS INFORMATION**

Information about the Fund's daily portfolio holdings is available at [www.lexietf.com](http://www.lexietf.com). A complete description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio holdings is available in the Fund's Statement of Additional Information ("SAI").

### **MANAGEMENT**

#### **Investment Adviser**

Alexis Investment Partners, LLC, located at 199 Waterpoint Court, Unit 204, Montgomery, Texas 77356, serves as the investment adviser for the Fund. The Adviser, subject to the oversight of the Board, provides an investment management program for the Fund and manages the day-to-day investment of the Fund's assets. The Adviser also arranges for transfer agency, custody, fund administration, distribution and all other services necessary for the Fund to operate. The Adviser is an SEC-registered investment adviser that provides investment advisory services to institutional clients, in addition to providing investment advisory services to the Fund. As of June 15, 2021, the Adviser had approximately \$88.98 million in assets under management.

For the services it provides to the Fund, the Adviser is entitled to a unified management fee, which is calculated daily and paid monthly, at an annual rate based on the Fund's average daily net assets, as follows:

0.85% on first \$250,000,000
0.75% on the next \$250,000,000
0.65% in excess of \$500,000,000

Pursuant to an investment advisory agreement between the Trust, on behalf of the Fund, and the Adviser (the "Advisory Agreement"), the Adviser has agreed to pay all expenses of the Fund except the fee paid to the Adviser under the Advisory Agreement, interest charges on any borrowings, dividends, and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution (12b-1) fees and expenses (if any).

The basis for the Board's approval of the Advisory Agreement will be available in the Fund's first Annual or Semi-Annual Report to Shareholders.

#### **Portfolio Managers**

Jason Browne and Alexis Browne are jointly and primarily responsible for the day-to-day management of the Fund's portfolio.

Mr. Browne is the President and founder of the Adviser and serves as Lead Portfolio Manager and Chief Compliance Officer. He has decades of experience investing for individual and institutional clients and as portfolio manager and chief investment strategist for a series of mutual funds. Prior to founding the Adviser, Mr. Browne served as Chief Investment Strategist and Portfolio Manager (2018-2019), Chief Investment Officer (2011-2018), and Portfolio Manager (2000-2011) at FundX Investment Group. Among other responsibilities, he directed options trading and tactical decisions for FundX Investment Group's long/short equity mutual fund. He also served as Principal Executive Officer and President of FundX Investment Trust (2014-2018). Mr. Browne earned his MBA from St Mary's College in 2008 and his BA from San Francisco State University in 1994. He also maintains his ChFC and AIF designations.

Ms. Browne serves as a Portfolio Manager and Chief Operating Officer at the Adviser. She is heavily involved in client relationships, trading decisions, back office and day-to-day operations, and research projects. Prior to joining the Adviser in 2018, Ms. Browne had

engaged in a series of research projects at FundX Investment Group during summer internships in 2016 and 2017. From 2019 to 2020, she served on the Thompson Portfolio Board, where she managed part of Lehigh University's endowment. Ms. Browne graduated with a BA in Economics from Lehigh University with High Honors in 2020.

The Fund's SAI provides additional information about the Portfolio Managers' compensation structure, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of Shares.

### **Other Service Providers**

Forside Fund Services, LLC (the "Distributor"), is the principal underwriter and distributor of the Fund's shares. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101. The Distributor will not distribute shares in less than whole Creation Units, and it does not maintain a secondary market in the shares. The Distributor is a broker-dealer registered under the Securities Exchange Act of 1934 and a member of the Financial Industry Regulatory Authority, Inc. ("FINRA"). The Distributor has no role in determining the policies of the Fund or the securities that are purchased or sold by the Fund and is not affiliated with the Adviser or any of its affiliates.

U.S. Bancorp Fund Services, LLC, doing business as U.S. Bank Global Fund Services, located at 615 East Michigan Street, Milwaukee, Wisconsin 53202, serves as the administrator and transfer agent for the Fund.

U.S. Bank National Association, located at 1555 N. Rivercenter Drive, Suite 302, Milwaukee, Wisconsin 53212, serves as the custodian for the Fund.

Morgan, Lewis & Bockius LLP, located at 1111 Pennsylvania Avenue, N.W., Washington, D.C. 20004, serves as legal counsel to the Trust.

Cohen & Company, Ltd., located at 1350 Euclid Avenue, Suite 800, Cleveland, Ohio 44115, serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

### **HOW TO BUY AND SELL SHARES**

The Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from the Fund, and only APs may tender their Shares for redemption directly to the Fund, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

### **Book Entry**

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" through your brokerage account.

### **Frequent Purchases and Redemptions of Shares**

The Fund imposes no restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with the Fund, are an essential part of the ETF process and help keep Share trading prices in line with NAV. As such, the Fund accommodates frequent purchases and redemptions by APs. However, frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, the Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs

incurred by the Fund in effecting trades. In addition, the Fund and the Adviser reserve the right to reject any purchase order at any time.

### **Determination of Net Asset Value**

The Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern time, each day the NYSE is open for business. The NAV is calculated by dividing the Fund's net assets by its Shares outstanding.

In calculating its NAV, the Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. The values of non-U.S. dollar denominated securities are converted to U.S. dollars using foreign currency exchange rates generally determined as of 4:00 p.m., London time. If such information is not available for a security held by the Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Board (as described below).

### **Fair Value Pricing**

The Board has adopted procedures and methodologies to fair value Fund securities whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) a security has been de-listed or has had its trading halted or suspended; (ii) a security's primary pricing source is unable or unwilling to provide a price; (iii) a security's primary trading market is closed during regular market hours; or (iv) a security's value is materially affected by events occurring after the close of the security's primary trading market. Generally, when fair valuing a security, the Fund will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the security, general and/or specific market conditions and the specific facts giving rise to the need to fair value the security. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Board-adopted valuation procedures. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the security upon the sale of such security.

### **Investments by Registered Investment Companies**

Section 12(d)(1) of the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions, including that such investment companies enter into an agreement with the Fund.

## **DIVIDENDS, DISTRIBUTIONS, AND TAXES**

### **Dividends and Distributions**

The Fund expects to pay out dividends, if any, and distribute any net realized capital gains to its shareholders at least annually. The Fund will declare and pay capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

### **Taxes**

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Fund. Your investment in the Fund may have other tax implications. Please consult your tax adviser about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

The Fund intends to elect and qualify each year for treatment as a RIC. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, the Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when the Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (APs only).

### **Taxes on Distributions**

The Fund intends to distribute, at least annually, substantially all of its net investment income and net capital gains. For federal income tax purposes, distributions of investment income are generally taxable as ordinary income or qualified dividend income. Taxes on distributions of capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares. Sales of assets held by the Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by the Fund for one year or less generally result in short-term capital gains and losses. Distributions of the Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are

reported by the Fund as capital gain dividends (“Capital Gain Dividends”) will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates of up to 20% (lower rates apply to individuals in lower tax brackets). Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by the Fund as “qualified dividend income” are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided holding period and other requirements are met. “Qualified dividend income” generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends received deduction for the portion of dividends they receive from the Fund that are attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations.

Shortly after the close of each calendar year, you will be informed of the amount and character of any distributions received from the Fund.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the Shares’ NAV when you purchased your Shares).

You may wish to avoid investing in the Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by the Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. Gains from the sale or other disposition of your Shares from non-U.S. shareholders generally are not subject to U.S. taxation, unless you are a nonresident alien individual who is physically present in the U.S. for 183 days or more per year. The Fund may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Different tax consequences may result if you are a foreign shareholder engaged in a trade or business within the United States or if a tax treaty applies.

Under legislation generally known as “FATCA” (the Foreign Account Tax Compliance Act), the Fund is required to withhold 30% of certain ordinary dividends it pays to shareholders that are foreign entities and that fail to meet prescribed information reporting or certification requirements.

The Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

### **Taxes When Shares Are Sold on the Exchange**

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the disposition of Shares. The ability to deduct capital losses may be limited.

The cost basis of Shares of a Fund acquired by purchase will generally be based on the amount paid for the Shares and then may be subsequently adjusted for other applicable transactions as required by the Code. The difference between the selling price and the cost basis of Shares generally determines the amount of the capital gain or loss realized on the sale or exchange of Shares. Contact the broker through whom you purchased your Shares to obtain information with respect to the available cost basis reporting methods and elections for your account.

### **Taxes on Purchases and Redemptions of Creation Units**

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP’s aggregate basis in the securities delivered, plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP’s basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does not mark-to-market its

holdings) or on the basis that there has been no significant change in economic position. APs exchanging securities should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less.

The Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in kind. As a result, the Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

### **Investments in Complex Securities**

Certain of the Fund's investments, such as investments in commodity-linked derivatives, when made directly, may not produce qualifying income to the Fund. To the extent the Fund invests in commodity-linked derivatives, the Fund will seek to restrict its income from such instruments that do not generate qualifying income to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income).

If the Fund fails to qualify as a RIC and to avail itself of certain relief provisions, it would be subject to tax at the regular corporate rate without any deduction for distributions to shareholders, and its distributions would generally be taxable as dividends. Please see the SAI for a more detailed discussion, including the availability of certain relief provisions for certain failures by the Fund to qualify as a RIC.

The Fund may invest in REITs. "Qualified REIT dividends" (*i.e.*, ordinary REIT dividends other than capital gain dividends and portions of REIT dividends designated as qualified dividend income eligible for capital gain tax rates) are eligible for a 20% deduction by non-corporate taxpayers. This deduction, if allowed in full, equates to a maximum effective tax rate of 29.6% (37% top rate applied to income after 20% deduction). Distributions by the Fund to its shareholders that are attributable to qualified REIT dividends received by the Fund and which the Fund properly reports as "section 199A dividends," are treated as "qualified REIT dividends" in the hands of non-corporate shareholders. A section 199A dividend is treated as a qualified REIT dividend only if the shareholder receiving such dividend holds the dividend-paying RIC shares for at least 46 days of the 91-day period beginning 45 days before the shares become ex-dividend, and is not under an obligation to make related payments with respect to a position in substantially similar or related property. The Fund is permitted to report such part of its dividends as section 199A dividends as are eligible, but is not required to do so.

REITs in which the Fund invests often do not provide complete and final tax information to the Fund until after the time that the Fund issues a tax reporting statement. As a result, the Fund may at times find it necessary to reclassify the amount and character of its distributions to you after it issues your tax reporting statement. When such reclassification is necessary, the Fund (or its administrative agent) will send you a corrected, final Form 1099-DIV to reflect the reclassified information. If you receive a corrected Form 1099-DIV, use the information on this corrected form, and not the information on the previously issued tax reporting statement, in completing your tax returns.

### **Net Investment Income Tax**

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% tax on all or a portion of their "net investment income," which includes interest, dividends, and certain capital gains (generally including capital gains distributions and capital gains realized on the sale of Shares). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

### **Foreign Investments by the Fund**

Interest and other income received by the Fund with respect to foreign securities may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may reduce or eliminate such taxes. If as of the close of a taxable year more than 50% of the value of the Fund's assets consists of certain foreign stock or securities, the Fund will be eligible to elect to "pass through" to investors the amount of foreign income and similar taxes (including withholding taxes) paid by the Fund during that taxable year. This means that investors would be considered to have received as additional income their respective shares of such foreign taxes, but may be entitled to either a corresponding tax deduction in calculating taxable income, or, subject to certain limitations, a credit in calculating federal income tax. If the Fund does not so elect, it will be entitled to claim a deduction for certain foreign taxes incurred by the Fund. The Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) will notify you if it makes such an election and provide you with the information necessary to reflect foreign taxes paid on your income tax return.

*The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares. Consult your personal tax adviser about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.*

## **DISTRIBUTION PLAN**

The Board has adopted a Distribution and Service Plan (the “Plan”) pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of Fund assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

## **PREMIUM/DISCOUNT INFORMATION**

Information regarding how often Shares traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV per share is available on the Fund’s website at [www.lexietf.com](http://www.lexietf.com).

## **ADDITIONAL NOTICES**

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which the Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Fund make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly.

## **FINANCIAL HIGHLIGHTS**

Financial information is not available because the Fund had not commenced operations prior to the date of this Prospectus.
