

FUND DESCRIPTION

The Alexis Practical Tactical ETF (the “Fund”) has the flexibility to allocate its assets in markets around the world and among various asset classes and strategies, including equity, fixed-income, commodities (including precious metals), real estate investment trusts (“REITs”), alternative strategies (including merger arbitrage, convertible bond and options-based) and cash and cash equivalents.

Practical

- We strive to evaluate current conditions as they are – rather than what we think should be or fear might be.
- We don't rely on predictions, but we do apply decades of practical experience and objective data to form opinions, exercise judgment and plan contingencies.

Tactical

- Our hierarchy of tactical decisions flows from asset allocation and risk management to security selection based on relative performance and anticipated portfolio contribution.
- Our portfolio is actively managed to pursue current opportunities with a strategy designed to respond to new information and changing trends.

Underlying Stocks are shown in notional terms and subject to change. Underlying Stocks are an approximation based on a look through of direct exposure and indirect exposure from the Top 25 Stock Holdings of the ETFs.

Asset Class Allocation is based on the objective of each ETF and not looking through its underlying holdings.

A fund's NAV is the sum of all its assets less any liabilities, divided by the number of shares outstanding. The market price is the most recent price at which the fund was traded.

¹ETFs use creation units, which allow for the purchase and sale of assets in the fund collectively. Consequently, ETFs usually generate fewer capital gain distributions overall, which can make them somewhat more tax-efficient than mutual funds.

²Diversification does not ensure profits or prevent losses.

³Morningstar Global Markets Index measures the performance of stocks located in developed and emerging markets worldwide.

⁴Bloomberg US Aggregate Bond Index broadly tracks the U.S. investment-grade bond market.

Investing Involves risk Including possible loss of principal

The Fund's investment performance depends upon the successful allocation by the Adviser of the Fund's assets among asset classes, geographical regions, industry sectors, and specific issuers and investments. heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. There is no guarantee that the Adviser's allocation techniques and decisions will be successful.

Fixed income securities are subject to call, credit, extension, and interest rate risk. Foreign and emerging market investing involves currency, political and economic risk. Investments in real estate, commodities, and mortgage-backed securities, and other alternative investments include additional risks. For a more complete discussion see the prospectus.

Short term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns. Only returns for periods greater than one year are annualized.

Before Investing carefully consider the fund's investment objective, risks, charges, and expenses contained in the prospectus available at www.lexietf.com. Please read the prospectus carefully.
